
total solve time per control cycle (all iterations), closed loop without budget
(line = mean over cycles)
right axis: final trajectory cost J_track + J_obs of the driven trajectory
Average computation time per control cycle [ms] (solid)
final trajectory cost (closed loop, dashed)

filled: reached the goal
hollow: not reached, or obstacle cost > 500 (drove through)
solid: computation time (left)
dashed x: trajectory cost (right)
